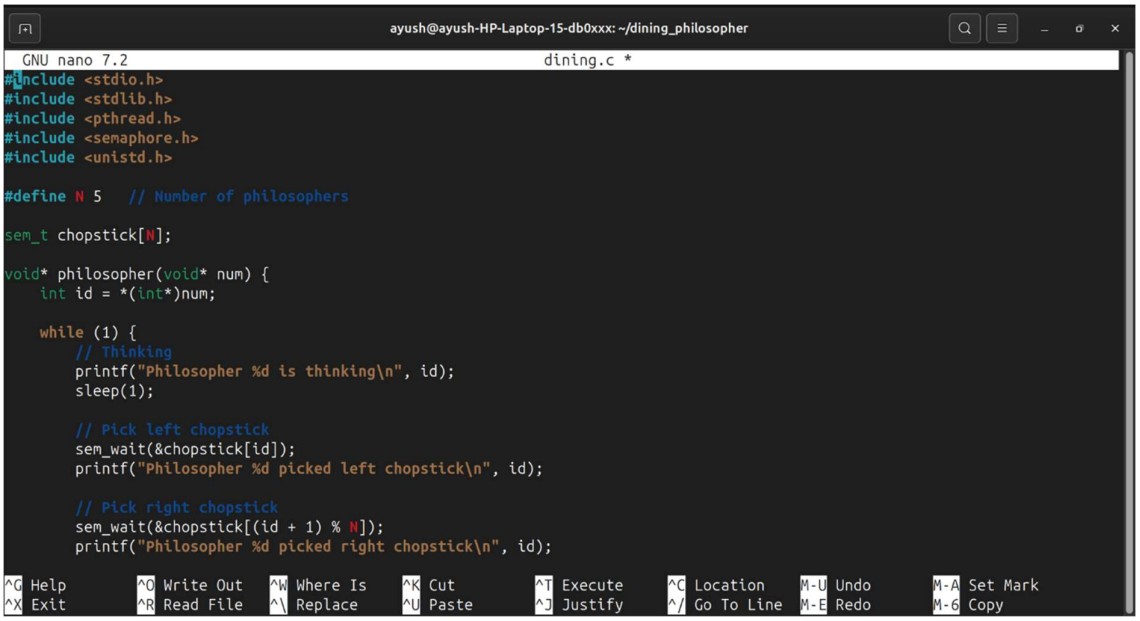
Practical-6 OUTPUT

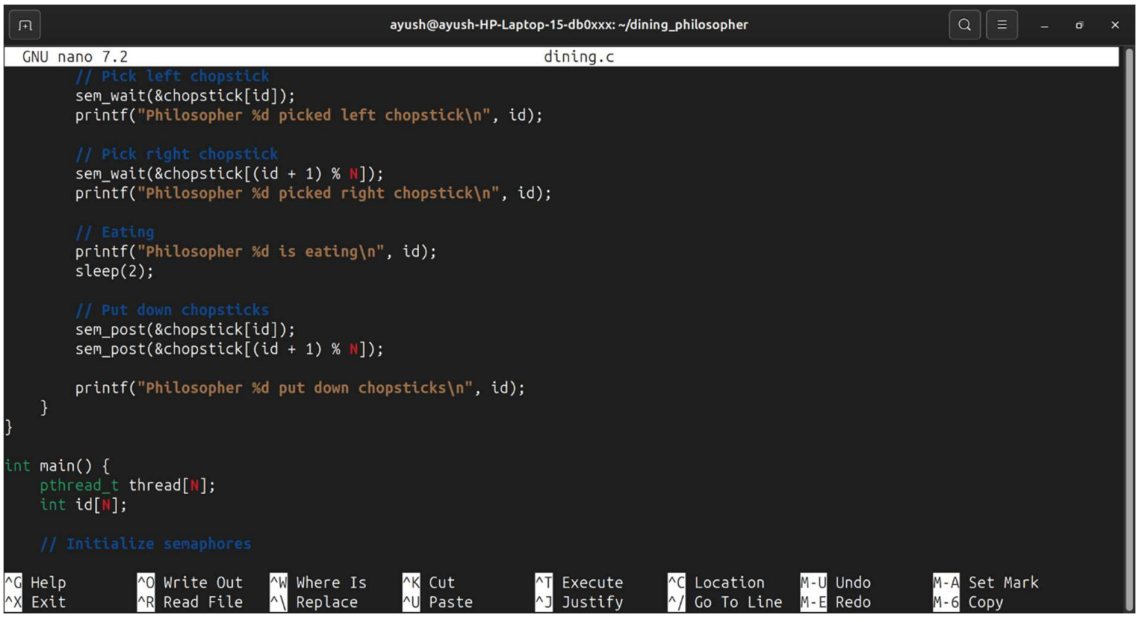
Initialization:

This section includes the required header files, defines the number of philosophers, initializes semaphores, and begins the philosopher thread function for the Dining Philosopher problem.



Synchronization:

This section demonstrates process synchronization using semaphores where each philosopher picks up and releases chopsticks to eat without conflict.



Execution:

This section initializes semaphores, creates philosopher threads, and manages their execution using thread creation and joining mechanisms.

Output:

This section displays the execution of the Dining Philosopher problem, showing philosophers thinking, picking up chopsticks, eating, and releasing chopsticks in a synchronized manner.
